

Customer Success Story

The problem

Statewide Recycling wanted to improve the efficiency of the system by computerising it.

The system would need to maintain accurate records, be able to provide an easy to search history of transactions, create Recipient Created Tax Invoices for the recyclers, and integrate with their existing accounting system.

Statewide *Recycling*

Background

Statewide Recycling are a “super” recycler of recyclable materials such as plastic bottles, aluminium cans and milk cartons. Ordinary recyclers collect materials from various locations throughout the Adelaide and the state.

These materials are delivered to the “super” recycler who weighs, assesses the quality of the materials and then needs to pay the recyclers. This was being done in very manual system.

Advance’s Solution

Customised Software

Customer Success Story

The Advance solution

Advance developed a new system that met all these criteria.

Efficient data entry screens enable the data about suppliers and their deliveries to be easily managed and the history of past transactions can be easily searched.

The new system seamlessly integrated with their existing accounting system, enabling the export of Recipient Created Tax Invoices to that their accounting system for payment. Various management reports were also provided.

Results to date:

The manual, paper-based system has been replaced with a computerised solution.

The new system is more efficient, and as better records are kept and thus better quality control of their products, profit has been improved.

About Customisation

When off the shelf solutions can't meet your specific needs, Advance's team can customise a programme just for you. Some of our clients have complex requirements relating to customers and suppliers and a custom solution is the only solution.

Advance have worked with many clients on customisation from Insurance Brokers to Recyclers, all looking for a tailored solution to give them the business information they need to succeed.
